

FOOD ANALYSIS

A special field in which AGROLAB works is the reliable and rapid validation of the **quality, safety and authenticity** of your products. This is a complex field which depends on the raw materials and their processing. Modern analytical processes help make these attributes measurable and controllable.

You receive reliable analytical results from **our neutral and accredited testing institutes**. AGROLAB tests raw materials and food products on your behalf for their contents, tests their declared values, determines their vitamins, and much more. The origin and authenticity of raw materials and end products can be analytically checked by „chemical fingerprinting“ - forgery-proof. Firm contacts take care of all your concerns, personally. Food analysis at AGROLAB stands for optimum analysis and servicing, from the producer to the food manufacturer through to the retail.

COMPREHENSIVE SPECTRUM OF ANALYSIS

- Analysis of contents & nutritional values
- Analysis of vitamins, minerals and trace elements
- Analysis of contaminants & residues
- Microbiological quality & hygiene control
- Proof of radioactivity
