**AGROLAB** GROUP

Your labs. Your service.

# Analysis of pet food

High-quality pet food – AGROLAB is your expert analytical partner, from raw materials right through to the finished product.

We're all familiar with the scene of a dog joyfully greeting its owner or a kitten failing at a daring leap – not least from animal videos. Pets make us laugh, are loyal companions in everyday life and, for many people, are part of the family – a trend that is on the rise. It is therefore no surprise that pet owners are also keen to ensure their pets' wellbeing and provide them with the best possible care.

The range of complete and compound feeds in the pet food sector is correspondingly extensive and varied. Consumers have high expectations regarding the quality of pet food – the products must, on the one hand, ensure a wholesome and healthy diet for pets and, on the other hand, be free from undesirable or harmful substances.

Pet food manufacturers must comply with these requirements and are therefore faced with a wide range of possible tests. In addition, there are a multitude of legal requirements that must be taken into account when placing pet food on the market.

The AGROLAB GROUP can assist you with these issues by offering a comprehensive range of analytical services and expert advice on legal matters.

### An extract from our range of analyses

#### + Nutrients of value
